PROFESSIONAL SUMMARY

[Portfolio](#)

Purpose driven professional with 3 years of experience as an Engineer, now transitioning into Data Science with a strong foundation in machine learning, deep learning, and real-world AI projects. Fueled by a deep curiosity for solving problems with data, I've independently upskilled through certifications, hands-on projects, and continuous learning. I look forward to work with an organisation where I can leverage my skills and mind to build impactful technology for common people.

SKILLS

Programming & Scripting Languages: Python, SQL

Data Analysis & Manipulation: NumPy, Pandas, Statistics, Matplotlib, Seaborn, Scikit-Learn

Deep Learning Frameworks: TensorFlow, Keras, Transfer Learning, Fine-tuning

AI Technologies: ML, DL, Computer Vision, NLP, Transformers, RAG, GenAI, HuggingFace

Cloud & MLOps: Azure ML

PROJECTS

Plant Health Monitoring System – Multi-Modal Application

[Link](#)

- Designed and trained a CNN model to identify 100 urban terrace garden plants and detect the plant health. The model is trained on around **72K images** of 100 varieties of plants with 10 different conditions.
- The model detects the type of the plant and its condition (Rotting/Healthy/Overwatered/Nutrient Deficient). This model predicts plant and their state with **80% accuracy**. This information is fed to GPT4 as prompt to provide plant diagnostics and healthcare suggestions.
- Designed a user-friendly website for end-users to use this application to cherish and maintain their plants efficiently.

Recommendation System – ML App with Content Based Filtering

[Link](#)

(Tools: Python, Pandas, Scikit-Learn, Streamlit, TMDb API, Cosine Similarity)

- Built and deployed a content-based movie recommender system achieving **~95% match accuracy** based on user feedback collected via validation set and survey-based evaluation.
- Used TF-IDF vectorization and cosine similarity to analyse metadata of **5,000+ movies** and recommend top 5 similar titles per user input.
- Evaluated system performance by comparing recommendations with IMDb genre overlap and user test feedback, achieving high relevance in 4/5 predictions on average.

WORK HISTORY

ITC Infotech

Associate Consultant

2023 – 2024

- Collaborated with cross-functional teams (engineering, QA) to identify and escalate recurring product issues, reducing incident recurrence by 20%.
- Automated daily and weekly application and server health check reports by implementing a batch script querying the logs from servers and database and visualising the statistics in tabular format.
- Mentored 3 new support engineers, documenting onboarding KT content -- helping reduce ramp-up time by 40%.

Tata Consultancy Services Ltd.

System Engineer

2021 – 2023

- Supported various integrations and deployment activities. Monitoring integrations in Production and Pre-Prod environments.
- Reduced incident tickets by 45% by implementing job status alerts.
- Authored detailed technical documentation and standard operating procedures (SOPs) to streamline onboarding and improve internal knowledge sharing.

EDUCATION

Bachelor of Engineering in Computer Science and Technology

St. Joseph's College of Engineering, Anna University

2017 – 2021

CERTIFICATIONS

Data Science Certification with Intellipaat and IIT Madras

(covering Python, OOPS, Statistics, Machine Learning, Deep Learning, MLOPS and SQL)
